Solarvalue AG Benefits from Solar-Grade Silicon Shortage

22nd European Photovoltaic Solar Energy Conference in Milan Proves Full Success for Solarvalue AG

The 22nd European Photovoltaic Solar Energy Conference in Milan was a complete success for the Berlin-based Solarvalue AG. A large number of visitors were updated on the production of high purity solar-grade silicon from metallurgical grade silicon, as well as on the possibilities of investing into this forward looking technology when they visited the company's stand. The Solarvalue team held numerous intensive discussions and successfully initiated many partnerships.

Speaking on the subject, Claudia Boehringer, CEO of Solarvalue AG said: "The 22nd European Photovoltaic Solar Energy Conference showed that there is a huge interest in high-purity solar grade silicon. We expect that in the medium term the demand will clearly exceed the supply. As a result, everyone shows great interest in solar-grade silicon manufacturers such as Solarvalue AG. By invitation of the Taiwanese Chamber of Commerce, we will be holding a talk at the Taiwan International Photovoltaic Forum & Exhibition in Taipei on 12th October, and from 22nd – 23rd November we will be present at the 8th Solarpraxis Forum in Berlin."

Solar-grade silicon is the key to a growing solar energy production market, which - according to experts - will grow into a leading industry comparable with today's automobile industry. The manufacture of solar-grade silicon from metallurgical grade silicon is more economical and environmentally friendly than the widely used Siemens Process.

About Solarvalue: Solarvalue AG, which has its HQ in Berlin, was founded in June 2005. The company's primary purpose is the manufacture of high purity solar-grade silicon. Its long term goal is the development of a complete value chain for an integrated photovoltaics group.
